

For Immediate Release –

Date: March 1, 2022

Fischer Imaging Inc. awarded a Phase II SBIR grant from the National Institutes of Health.

Denver, CO: Fischer Imaging is proud to announce that the company has been awarded a \$2.0M NIH Phase II SBIR grant award to advance its MammoCAT advanced digital mammography system based on our patented slot-scanning technology for the early detection and diagnosis of breast cancer. This is our 3rd grant award from the NIH.

Shabbir Bambot, PhD., President of Fischer Imaging stated “Our work continues Fischer Imaging’s long and distinguished history of improving early diagnosis of breast cancer. Our MammoCAT technology doubles the spatial resolution and increases the contrast of today’s mammography systems using less than half the radiation dose in a pain free test. We appreciate the continued support of the NIH and the support of our research and clinical partners who have helped us advance this innovative technology.”

About Fischer Imaging, LLC

Fischer Imaging, LLC is a privately held company based in Denver, Colorado that succeeds Fischer Imaging Corp. with roots going back to 1910. Fischer Imaging is focused on improving outcomes for cancer patients through advanced imaging and meaningful innovation.

Note: MammoCAT is under development and is not yet available for sale in the US.
